Continuation of 2. NOTE: Regarding the rejection of claims 1-7, 10, 16, 25-30, and 37-40 as being anticipated by Horney USPN 5549589, applicant's arguments are not persuasive. Applicant repeats the argument that Horney does not disclose a refined blend of crosslinked and noncrosslinked fibers. Firstly, Horney discloses the high surface fibers and stiffened fibers are well mixed in a slurry and a refiner can be used for that purpose. The examiner maintains this would result in a refined blend of fibers as claimed. Secondly, the instant specification does not define 'refined blend' - given the broadest reasonable interpretation, the examiner interprets refined blend to mean well mixed or free of clumps or clusters of particles. Horney discloses such a mixture in his description of the blend of high cellulose fibers and stiffened fibers at col. 7, lines 13-19. Regarding the argument that a refined blend would go against the teaching of high capillary suction, again applicant has not defined a 'refined blend', so the teaching of a well mixed slurry blended in a refiner reads on the 'refined' limitation. Additionally, Horney teaches a well mixed blend of fibers that produce a high capillary suction. Therefore, the examiner has reasonable factual basis to conclude such a 'refined blend' of fibers would not reduce the bulk or capillary suction. In fact, Horney teaches blended fine fibers and stiffened fibers that have the ability to maintain an open capillary structure providing both loft and permeability (col. 5, lines 38-50).
